

Photography Tips & Tricks

1. Take LOTS of photos

- Bring your camera with you everywhere and get lots of shots. Take pictures of anything, like your pet, your family or friends, the trees outside, anything you see!
- Remember to ask permission when you're taking photos of people.

2. Lighting is super important

- Put the sun to your back and avoid taking pictures into direct light.
- Try taking photos at different times of the day too!

3. Look at the world from different perspectives

- Take pictures from different angles and perspectives to get a unique shot. Get down really low and pretend to be a bug looking up at the world. Or get up high and pretend to be a squirrel looking down from a tree.

4. Have fun!

- This is the most important part. Practice taking photos, experiment with new things, make mistakes, and get messy!
